EDITORIAL

Dear colleagues..

It has been our leader's dream for many years to represent Saudi Arabia as a major contributor in research. King Abdullah University of Science and Technology which is the brainchild of King Abdullah Bin Abdulaziz Al Saud is one such dreams that came true.

King Abdulaziz University, in Jeddah have the same vision and works to establish research environment that takes the lead to be a national, regional as well as international leadership in the research quality that will contribute to the benefit of the science and society. RACI Research and consulting Institute hosts the scientific chairs and Breast Cancer Scientific Chair is one of these.

One of our major objectives is to promote researches as Breast Cancer is becoming a real burden in Saudi Arabia. One of the challenge researchers and policymakers always face is lack of data and, this is a problem in all Arab world compared with developed world.

One way of promoting researches besides encouraging researchers and establishing scientific Chairs for researches is through sharing what is available and benefit from the local studies to understand where we stand and where to go in Breast Cancers.

This newsletter is just a tiny step in this direction where local stud-

ies in Saudi Arabia are collected and a bio-informative research Bank is under establishment for all locally published researches in Breast Cancer in Saudi Arabia and through this newsletter and in each volume we will present number of these articles to share Them with all Health Care Providers involved in care of Breast Cancer patients.

I hope that this baby newsletter grows and our bio-Bank becomes a reference as this is what King Abdulaziz and our President Professor Osama Tayeb are working for to move towards a new Era in women's health among the developed world.

Dr. Samia Al-Amoudi
