

A STUDY ON THE EFFECTIVENESS OF "CENTURY COMPLETE CAPSULES" IN THE TREATMENT OF PERIODONTAL DISEASES

Shaaban M. Shehata*, Soliman O. Amr*, and Magdy K. Mohamed**

ABSTRACT

In a double blind trial, the effect of multivitamin "century complete capsules" on the periodontal treatment was examined. Forty-male patients have adult periodontitis were involved in this study.

They divided into two equal groups I, II. Group I patients received century complete capsules in addition to local periodontal therapy while group II patients received placebo tablets. The clinical parameters involved in this study were Plaque Index, Gingival Index and pocket depth. The bacteriologic evaluation involved plaque samples to be examined by dark field microscopy.

The results of this study revealed enhancement the resolution of gingival inflammation and reduction of pocket depth in patients received century capsules while there is no any radiographic changes appears in both groups.
